Subject: Misc. Metal Implementation Meeting Notes from June 1, 2004.

Misc. Metal Implementation Tools development Workgroup

Meeting Notes

June 1, 2004

Hi Guys,

For those who weren't able to join us for this months meeting, below are the meeting notes (please note that we changed the meeting for next month to July 17).

1. Since July 4th was so close to our originally scheduled July 6 meeting, we decided to move the meeting to **July 17, 2004, 2-3 EST, call-in 919-541-5230** instead.
2. During the meeting we reviewed the Tool Development Plan to check for errors. If you have not yet checked the website address that is linked with your name on the tool development plan, please do so ASAP and let me know if I have any incorrect links. Link to MMMM Tool Development Plan: <http://www.epa.gov/ttn/atw/misc/review/miscmetalplan.html>
3. Participants also decided to leave the link to the meeting notes on the tool development plan for now. These notes were originally put on the plan to help update new members. Once the tool development page is linked from the main rule and implementation page for Misc. Metal, this information will then be accessible to the "public". If you were not able to attend the meeting and have concerns about the meeting notes being available to the public, please let me know.
4. There have been quite a few emails that have come in regarding existing materials that may already be available out on the web. To make sure that this group doesn't overlap other efforts, meeting attendees committed to checking the web (or checking with others that they know) to see if any additional tools already exist for this standard. We let out of the meeting 1/2 early so that people had time to accomplish the task. We thought this would be prudent to do this one more time to make sure that we were aware of other efforts that are going on. Workgroup members should forward me any information that they find and Heather and I will compile the information for the next meeting. We can then go over the list at our next meeting and decide what course of action to take next for those items (e.g., should we link to them, should we ask authors to be part of our effort, etc.)
5. Also, something I forgot to talk about at the meeting yesterday. I am working on a page that contains information that all the coating rules might be able to use. It is still in the development stage but if you know of any information that could be added, let me know. Eventually, all the coating rule pages on the Air Toxics Website will link to this - <http://www.epa.gov/ttn/atw/coat/common/coatings.html>
6. Attached is a draft version of the Misc. Metal Timelinehopefully we'll have the draft brochure completed by the next call.

Misc metal-timeline.doc

Thanks. Ingrid.

Here is some of the information that has already come in:

Dan Murray - I helped develop the "one-number" spreadsheet with others from the Clean Mfg. Technology and Safe Materials Institute at Purdue that has been referenced in a few communications. We hope that will help those sources wishing to use the one number average approach.

Amelia Gooding - Sent her Small Business Association members an email requesting information on any tools that the State/Local SBAP may be developing for this standard.

Bill Wiley - Found several website links below
